

SpiderCuff

MODEL 10

Only *SpiderCuff* handcuffs *automate safety!*

SpiderCuff handcuffs are the only handcuffs that automate safety, providing physical safety to detainees and increased liability protection for officers. Our patented **Automatic Double Lock (ADL)** prevents overly tight initial application and prevents tightening after application... automatically.

Our Model 10 is a traditional chain style handcuff which features the ADL Technology. Additional features included:

- Anodized Aluminum external construction and corrosion resistant internals
- Up to 20% lighter than standard steel handcuffs
- “Pistol Grip” which allows control similar to a hinged hand cuff
- Ergonomic grip with rounded edges
- Wider Bail (also called Bow, Ratchet, or Single Strand) is up to 63% wider than other handcuffs. This spreads force over a greater area, thereby reducing possibility of injury (Handcuff Neuropathy)
- Finger activated “double lock”. Since Spidercuff automates the double lock process, this now becomes a manual “triple” lock that engages the anti-pick deterrence.
- Utilizes standard key

The Model 10 is designed for those wanting an improved, lighter weight unit that combines the flexibility of a chain handcuff with the control and grip of a hinged cuff.
